

TransGapProject
Audit Recipe Book

by
Conference Attendees at TGP23

- Are pronouns being accurately recorded on electronic systems and discharge summaries?
- Are transgender individuals being misgendered on their medical records? If so, when and where is this occurring?
- Should gender be recorded in medical files, and is it currently being recorded accurately?
- Is training on LGBTQ+ healthcare mandatory for all staff in GP practices? How frequently is it provided, and was it developed in collaboration with stakeholders?
- How many LGBTQ+ champions are there in each GP practice, and do all practices have one?
- How often are transgender individuals referenced in medical revision questions, and are these references based on stereotypes?
- What is the level of awareness and training on cultural intelligence (CQ) among AHCPs, pharmacists, and nurses?
- What are the experiences and wait times for LGBTQ+ patients in A&E departments?
- How many transgender individuals are invited for prostate, cervical and breast screenings, and are they aware of the importance of such screenings?
- What is the level of training and comfort among clinicians regarding transgender healthcare?
- Do transgender patients spend longer in hospitals, have more tests/visits, incidental findings, and comorbidities compared to cisgender patients?
- At what stage is cancer typically presented in transgender individuals, and what are the treatment outcomes in terms of mortality and severity?
- Are there any differences in the treatment/assessment of chronic pain between transgender and cisgender individuals?
- Do GPs know the process of changing gender in primary care records, and what is their level of understanding regarding this process?
- What is the level of interest among healthcare professionals in receiving training on transgender healthcare?
- What is the response to bystander training, and do participants feel more informed after completing the training?
- How accessible are primary care services to patients on referral waitlists, and what mental health and social support services are available during this time?

- Are target ranges for transgender patients on hormone replacement therapy (HRT) being recorded accurately, and are blood tests being monitored regularly?
- Are bridging prescriptions being offered to individuals using unprescribed HRT, and are they being monitored appropriately?
- What is the extent of information exchange between private and NHS healthcare providers in relation to transgender patients?
- Are transgender patients being placed on the appropriate male or female wards, and what are the attitudes of staff in invasive scenarios?
- Are patients being asked about their ward preferences, and are their preferences being respected?
- How many patients are reporting being addressed incorrectly, and what steps are being taken to address this issue?
- Are waiting times for transgender patients receiving the same care as cisgender patients comparable, and are there any disparities in the care provided to transgender patients compared to census data?
- How often are blood tests being monitored for individuals on prescribed and non-prescribed HRT, and are safeguards in place to protect the health of transgender patients?
- Are patients being referred to appropriate services when needed, and are the services provided suitable for their needs?
- Are physical exams being conducted appropriately, and are chaperones being offered when necessary?
- What are the experiences of transgender individuals in sexual health clinics, and are they receiving appropriate care?
- What reference ranges are being used, and are they appropriate for transgender patients?
- How many unnecessary referrals are being made by GPs, and what steps are being taken to reduce them?
- Are healthcare professionals comfortable and confident in providing care to transgender patients, and what steps can be taken to improve their training and understanding of transgender healthcare?
